

DARYL MAGERA

CONTACT

- mageradaryl12@gmail.com
- 757-402-0354
- Orlando, FL 32810

SKILLS

- HTML5
- CSS3
- Javascript
- React.js
- Php
- MySQL
- Google Maps Api
- Wordpress
- Bootstrap
- Node
- Git and Github
- Scss and Less
- Hubble (templating language)
- Photoshop, Illustrator & InDesign

EDUCATION AND TRAINING

03/2019

Web Development - Full Stack

SUMMARY

Detail-oriented professional with experience and proven knowledge of web development. Aiming to leverage my skills to successfully fill a Full Stack Developer role at your company.

EXPERIENCE

Full Stack Developer
Global 5 Communications | Orlando, FL

08/2021 - Current

- Manage both back-end and front-end aspects of development process.
- Building projects in PHP, MySQL, JavaScript and, custom WordPress themes.
- Built a downloadable WordPress plugin called Apogee Menu.
- Programming applications and tools using object-oriented languages with goals of code abstraction, stability and reuse.
- Built the trip planner for I-4 Express lanes, using vanilla JavaScript and Google Maps API .
- Picked up some illustrator and, InDesign skills by drawing maps for upcoming closures along the I-4, and handouts.
- I create Monthly newsletter templates.
- Expert at googling (:)

Front End Developer
Ascend Inbound Marketing | Valdosta, GA

04/2021 - 08/2021

- Worked with product designers and product

Development

Lambda School
Silicon Valley

- Advanced Javascript
- Advanced CSS
- React

WEBSITES, PORTFOLIOS, PROFILES

- Portfolio:
<https://www.devdaryl.com/>
- LinkedIn:
<https://www.linkedin.com/in/daryl-magera-957140164/>
- Github: <https://github.com/darmag12>

managers to design user interactions in applications.

- Worked on a custom Wordpress theme that will later be converted into a hubspot theme
- Used a templating language called Hubl.
- Contributed to building modules and made continuous improvements on the parent theme.
- Utilized Hubdb to store data (not sensitive) and pulled the data into a project.
- Certified in Hubspot academy for the development course

Jr Web Developer
Markentum | Daytona Beach, FL

- 03/2020 - 04/2021*
- Maintained and help build custom themes on one of the biggest CMS platforms called WordPress.
 - Pulled files from the server to local development using FTP
 - Built pages using Html, CSS, Bootstrap, Javascript, and PHP.
 - Utilized ACF (Advanced Custom Fields).
 - Optimized and resized images using Photoshop
 - Added newly requested features to websites
 - Responsible for monthly backups.

Front-End Developer (FREELANCING)
Dartechx | Kennesaw, GA

- 08/2019 - 03/2020*
- Design and create websites for local businesses.
 - Collaborated with customers to determine needs and work through design options.
 - Build projects with clean and scalable code.
 - Teaching clients about Facebook ads.
 - Sell gigs on fiverr.

PROJECTS

I-4 EXPRESS TRIP PLANNER (2021 - 2022) - FDOT (Florida Department of Transportation) has been working on a way to relieve traffic congestion on the i4 general use lanes, especially in the Orlando

area. The solution was to build the i4 express lanes. These lanes are a little bit different from your typical express lane because the exit points don't match the general use lanes' exit points. To give you a brief example; If you decided to take the i4 express lane, and your exit is 70B. You'd have to make sure you can exit out of the express lane before exit 70B or you'll miss your exit since the exits of both i4 express, and i4 general use don't match.

How it works

This application lets you select your desired entry point (after selecting the direction you are traveling, in this case, it's either Eastbound or Westbound), then only shows the exits available depending on the entry point selected (starting from the closest to the furthest). By clicking on the points marked on the map, a pop-up displays a detailed mini-map and text with instructions on the selected point.

Technologies Used:

- HTML
- CSS
- BOOTSTRAP
- JAVASCRIPT
- WEBPACK
- BABEL
- Google Maps API

MOOVEAZE (2019 - 2020) - Building up to this project. I did a lot of tiny little projects while learning React (can be found in my github), but this was the ultimate project to summarize everything I learned. If you can't already tell by the title, this is a movie site (the title is a little bit corny). This site connects to The Movie Database (TMDB) API, to display popular, upcoming, now playing movies, and etc. Below are some of it's features;

- User authentication - If you already have a TMDB account you can login using those login credentials.
- Pagination
- Ability to select your favorite movies which will be saved in your user panel if you're logged in. (Next time you log back in you'll still see a list of your saved movies).
- Share functionality that enables you to share movies on social media.

Technologies Used:

- React.js

- Redux - for better state management
- TMDB API
- SCSS
